

3.1 Change the ETL package created in the previous class so that it can support parameters, in order to be possible to parametrize the:

- *Server name* where the databases for the staging area and data mart are stored;
- *Database name* that stores the Data Mart;
- *Database name* that stores the Staging Area;
- *Path* to the ETL Package location.

3.2 Generate the Time dimension (in a .csv file) for the data mart exercise/example by using Excel.
